

# Antares dryer ATT 025-340

with Tandem Technology

## Short Description

### Antares dryer with Tandem

**Technology** – an innovative family of dryers for compressed air from 2.5 to 34m<sup>3</sup>/min manufactured by Parker HZD (Hiross Zander Division). “Tandem Technology” effectively combines two well known classic drying techniques, working in harmony with one another, to form an optimised and unique compressed air treatment package - Refrigeration Technology/ Adsorption Technology. This unique combination enables high-quality compressed air to be provided to the end-user at low energy consumption levels when compared to more traditional adsorption dryers.

**Antares Tandem Technology** constantly achieves a dew-point of -40 °C as standard. To reach such levels of compressed air purity, patented product features and mode of operation contribute to extremely low purge-air requirements. Without the need to alter any of the components in the dryer, **AT-Technology** is able to supply a wide range of compressed air dew-points, achieved by simply setting the desired value on the control panel. Dew-points above zero, typical of the performance of a refrigeration dryer and dew-points below zero (down to -70 °C), which are in the realms of adsorption technology, are easily achievable in an efficient and economical manner.

Untreated, humid compressed air is initially confronted by a pre-filter protecting a traditional, but modified and patented refrigeration circuit, where the majority of the water vapour is effectively removed from the incoming air. The second stage consists of a highly-compact desiccant drying stage, protected before and after by high-performance oil/water-aerosol and particle removal filters, which serves to further reduce the moisture content of the air to a standard dew-point of -40 °C. Finally, clean, dry compressed air exits via the patented air/air heat-exchanger to be re-heated and delivered to the air distribution system.

Tried and tested, patent-pending technology, exploiting both PSA (pressure swing adsorption) and TSA (tempera-

ture swing adsorption) brings together an effective and economical solution to meet the needs of the compressed air user. With the addition of a dew-point dependent switching feature for periods of intermittent load, incorporated into the electronic controller of every **ATT dryer**, initial investment costs are quickly amortised and lifetime costs minimised.

**ATT dryers** equipped with an optional by-pass are ideally suited to meet the demands of seasonal variation, calling for application flexibility to meet dew-points requirements above zero in summer and below zero in winter. In such cases Antares Tandem Technology can be operated solely as a refrigeration-dryer or alternatively “in tandem” with the adsorption stage.

# Product Specification

## Antares dryer ATT 025-340 with Tandem Technology

The major advantage of Parker Hiross “Antares Tandem Technology” over and above that of other compressed air drying technologies is its contribution to energy-efficiency and overall running-cost reduction. Less overall power consumption, less purge-air consumption, constant and stable outlet-pressure dew-points and reduced operating and maintenance costs are the major features of this product range.

### Key Applications:

- Food & Beverage
- Surface treatment
- Instrumentation and control
- Automotive
- Materials handling
- Pharmaceutical
- Chemical
- Material forming
- Petrochemical

### Key Benefits:

- Lower operating costs vs. traditional heatless and heat-regenerative adsorption dryers (lower purge-air requirement and lower heater consumption).
- Reduced maintenance costs due to less desiccant-fill with extended life time.
- Exemption from periodic vessel inspection.
- Constant dew-point performance - no peaks above set-point.
- „Dial-a dew-point feature“ for seasonal operation (By-pass Option)
- Additional energy savings at partial load – (Dew-point-Dependant-Switching).
- Compact overall dimensions – Small footprint - Space saving.

### Scope of supply:

- Antares Tandem Technology dryer – supplied ready for installation.
- Complete with ISO-12500 validated oil/water-aerosol and particulate GL pre-filters, located prior to the refrigeration circuit, and pre-and post the adsorption stage.
- Dew-point Dependant Switching – A standard feature on all models.
- Integral timed condensate drain on models ATT025-090 - integral capacitance condensate drain on models ATT140-340.

### Optional:

- By-pass for seasonal operation (Models ATT060-340).
- 7“ colour -Touch Screen Display (Models ATT140-340).
- External electronic capacitive condensate drain (Models ATT025-090)

<sup>1</sup> Referring to 1 bar<sub>a</sub> and 20 °C at compressor suction capacity. Subsequently compressed to 7 bar<sub>g</sub> at 35 °C inlet to the dryer, at 100 % relative humidity, 25 °C ambient, for -40 °C pressure dew-point. Outlet flow is the average net flow following subtraction of the average purge-air flow.

<sup>2</sup> Calculated throughout the entire cycle period - includes total refrigeration-circuit and desiccant heater absorbed power.

<sup>3</sup> Purge-air flow throughout the entire cycle period, evaluated as an air compressor absorbed power at the rate of 5.5 kW/m<sup>3</sup>/min.

### Operating Range

Site Selection	Frost-free indoor installation in a non-hazardous environment
Ambient Temperature	5 to 50 °C
Compressed air inlet temperature	5 to 65 °C
Operating pressure	2 to 16 bar <sub>g</sub> - ATT025-040 2 to 12 bar <sub>g</sub> - ATT060-090-140 4 to 12 bar <sub>g</sub> - ATT260-340
Medium	Compressed air and gaseous nitrogen

### Electrical connections

Mains Voltage	230V, 1-phase, 50Hz on ATT025-090; 400V, 3-phase, 50Hz on ATT140-340
Protection class	IP44

### Materials of construction

Filters	See product-specification regarding GL filter ref: ZL and XL
Heat Exchanger fridge section	Stainless Steel plate-heat exchanger on ATT025-040 All-in-one „T-Smart Pack“ Aluminium heat exchanger on ATT060-340
Refrigerant fluid	R134a in ATT025-040; R407C in ATT060-340
Pressure vessels	Aluminium for ATT025-040; Carbon Steel for ATT060-340
Valve blocks	ATT025-140: Brass valve, Aluminium blocks, ATT260-340: 3-way valve galvanised steel, ball AISI 304, plastic check valves
Filling of desiccant section	Water-resistant Silica Gel

## Antares dryer ATT 025-340 with Tandem Technology

### Pressure vessel approvals

<b>EU</b>	Approval for fluid group 2 in accordance with the Pressure Equipment Directive 97/23/EC (Annex A)
-----------	---

### Quality assurance

<b>Development/Manufacture</b>	DIN EN ISO 9001, DIN EN ISO 14001
--------------------------------	-----------------------------------

### Correction factors for ATT model selection

Inlet Temperature (°C)	30	35	40	45	50	55	60	65
<b>Correction Factor</b>	1.22	1	0.81	0.69	0.59	0.52	0.46	0.4

Working Pressure (bar <sub>g</sub> ) <sup>1</sup>	4	5	6	7	8	9	10	11	12	13	14	15	16
<b>Correction Factor</b>	0.62	0.75	0.87	1	1.08	1.2	1.28	1.34	1.4	1.45	1.5	1.54	1.6

Ambient Temperature (°C)	20	25	30	35	40	45	50
<b>Correction Factor ATT025-040</b>	1.05	1	0.94	0.88	0.81	0.75	0.68
<b>Correction Factor ATT060-340</b>	1.06	1	0.95	0.90	0.83	0.77	0.72

Note:  
The above correction factors are approximative; please refer always to the software selection program for a precise selection.

<sup>1</sup> Model ATT025 - ATT040 max 16 bar<sub>g</sub>  
Model ATT060 - ATT340 max 12 bar<sub>g</sub>

### Example: air flow 500m<sup>3</sup>/h, operating pressure 8 bar<sub>g</sub>, 40 °C inlet T, 30 °C ambient T, at -40 °C pdp

- 1) Find the correction factor in the table above: 8 bar<sub>g</sub> = 1.08 ; 40 °C inlet = 0.81 ; 30 °C ambient = 0.95.
- 2) Calculate the required capacity: 1.08 x 0.81 x 0.95 = 0.83; 500/0.83 = 602 m<sup>3</sup>/h ; 602 / 60 = 10 m<sup>3</sup>/min.
- 3) Select the model which corresponds to the calculated capacity. It is acceptable to overload a model by 10 %:
  - a. If the requested air flow is intended to be the inlet flow to the dryer, select model ATT090. This model can nominally treat 9.0m<sup>3</sup>/min inlet flow (loading it with 10m<sup>3</sup>/min is acceptable approx. 10 % more).
  - b. If the requested air flow is intended to be the treated air flow at the output of the dryer, than select a larger model ATT140. Model ATT090 can deliver 8.7m<sup>3</sup>/min at the output, so requiring 10m<sup>3</sup>/min would be almost 15 % more than its rated performance. In this case the next model must be selected.
- 4) If the requirement is for a different dew-point, the selection procedure does not alter. The required pressure dew-point does not affect the model selection. It impacts only on the total power used by the selected model.

# Product Specification

## Antares dryer ATT 025-340 with Tandem Technology

### Factor to calculate the power consumption of an ATT model at pressure dew-point values which deviate from -40 °C and/or at partial load

Pressure Dew-point (°C)	Refrig. only	+3	0	-10	-20	-40	-70
<b>Correction Factor</b>	0.39	0.88	0.89	0.90	0.92	1	1.31

Partial Load	25 %	50 %	75 %	100 %
<b>Correction Factor</b>	0.66	0.82	0.94	1
<b>Correction Factor Refrigeration-circuit only <sup>1</sup></b>	0.52	0.76	0.90	1

<sup>1</sup> (ATT140-260-340 only)

#### Example: ATT140 working at -20 °C pdp and loaded with 50 % of its nominal capacity

- 1) Find the correction factor in the table above: -20 °C pdp = 0.92 ; 50 % load = 0.82.
- 2) The total power at nominal conditions consumed by model ATT140 (see performance table) is: 2.01 + 2.37 = 4.38kW.
- 3) Apply the correction factor. The total power consumed at the new conditions is: 4.38 x 0.92 x 0.82 = 3.30kW.

#### Example: ATT140 with seasonal "By-pass Option" (Refrigeration-circuit only active), unit loaded at 50%

- 1) Find the correction factor in the table above: Refrigeration-circuit only = 0.39 ; 50 % load with refrigeration-circuit only = 0.76.
- 2) Apply the correction factor to the total power consumed by an ATT140. The new value is: 4.38 x 0.39 x 0.76 = 1.3kW.

### Air quality classes, in accordance with ISO 8573-1:2010

<b>Particulate</b>	Class 2
<b>Humidity (gaseous)</b>	From Class 4 to Class 1 (depending upon dew-point setting)
<b>Total oil contamination</b>	Class 2

ATT model for 14 m <sup>3</sup> /min inlet, air cooled, 400 V, 3-phase, 50Hz power supply, max 12bar <sub>g</sub> operating pressure, equipped with integral electronic capacitive condensate drain, seasonal "By-Pass" and 7" touch screen display.							

# Parker's Motion & Control Technologies

mb air systems ltd

At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further info call 00800 27 27 5374
